Comments:

Language for Examiner's amendment:

Further to our telephone call of 27 September 2007, please enter an Examiner's amendment adding the following to the Brief Description of the Drawings:

Fig. 35 is a cross sectional view of a jig according to the invention.

Fig. 36 is a plan view of a plate adapted to be placed in the jig of Fig. 35.

Fig. 37 is a cross sectional view of the jig of Fig. 35 with stacked plates and a shaft pressed into the plate stack.

Please also substitute the following Abstract for the present Abstract:

A method of forming a winding core for an electric motor includes providing a hollow jig having a guide, sliding plates, each having a guide and a central opening, onto the guide in the jig where the guides mate, and pressing a shaft into the central opening of the plates. The plates are then compressed to form a lamination and secured in compression by a lock nut on the shaft.
